RISKS FACTORS

All types of investments carry some degree of risks which may have an adverse effect on the price of the investments. Therefore, before making an investment decision, investors are advised to consider the different types of risks that may affect the unit trust fund. Below are some of the general risks of investing in the unit trust fund and specific risks associated with the investment portfolio of the Fund.

GENERAL RISKS OF INVESTING IN A UNIT TRUST FUND

- **Market Risk**

Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political, social and/or other factors, which will result in a decline in the fund's net asset value. Market risk stems from the fact that there are economy-wide perils which impact all businesses. Investors will be exposed to market uncertainties no matter how a fund's investments are diversified. The fluctuations in the economy, political and social environment will affect the market price of the fund's investments either in a positive or negative way.

- **Manager's Risk**

This risk refers to the day-to-day management of a fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by the manager, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant laws or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.

- **Liquidity Risk**

Liquidity risks refer to the ease of liquidating an asset at or near its fair value depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices. In situation where the fund has insufficient cash and is unable to liquidate its assets due to market condition as aforesaid, redemption requests made by the unit holders are likely to be affected as the manager may not be able to fulfil its payment obligation on time.

- **Financing Risk**

The risk occurs when investors take a financing to finance their investment and thereafter unable to service the financing payments. If units are used as collateral, an investor may be required to top-up his existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower net asset value per unit as compared to the net asset value per unit at the point of purchase towards settling the financing.

- **Performance Risk**

As a result of the risk elements, the returns from a fund are not guaranteed. The value of the fund's investment will vary when disposed and an investment may be worth more or less than when purchased.

- **Inflation Risk**

This is the risk that the investors' investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.

- **Non-Compliance Risk**

This risk refers to the possibility that the manager may not follow the provisions set out in the information memorandum, the deed, the relevant laws, rules, guidelines or internal operating policies which governs the fund. Non-compliance may occur directly due to factors such as human error or system failure and can also occur indirectly due to amendment on the relevant regulatory frameworks, relevant laws, rules, and other legal practices affecting the fund. This risk may result in operational disruptions and potential losses to the fund.

- **Suspension of Redemption Request Risk**

Having considered the best interests of unit holders, the redemption requests by the unit holders may be subject to suspension due to exceptional circumstances, where the market value or fair value of a material portion of the fund's assets cannot be determined. In such case, unit holders will not be able to redeem their units and will be compelled to remain invested in the fund for a longer period of time than original timeline. Hence, their investments will continue to be subject to the risks inherent to the fund.

SPECIFIC RISKS ASSOCIATED TO THE FUND

- **Stock Specific Risk**

Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stocks will adversely affect the Fund's NAV.

- **Equity-related Securities Risk**

The risk of the Fund's investment in equity-related securities such as rights and warrants, where the price movement is dependent on the price movement of the underlying equities is generally higher than the underlying equities as these equity-related securities are leveraged form of investment. The price of equity-related securities generally fluctuates more than the underlying equities and consequently may affect the volatility of the Fund's NAV. For example, warrants have a limited life and will depreciate in value as they approach their maturity date. If a warrant's exercise price is above the share price at any time during its remaining subscription period, the warrant will theoretically carry little value and warrants that are not exercised at the maturity date become worthless.

- **Illiquidity Risk**

The investment to be made by the Fund would be generally illiquid. The eventual liquidity of all investment of the Fund will be dependent upon the success of the realisation strategy proposed for each investment which could adversely be affected by a variety of risk factors. The period of time required to liquidate the Fund's assets cannot be predicted with certainty.

- **Concentration Risk**

Concentration risk is the probability of loss arising from lack of diversification, investing with a single issuer. The strength of the issuer may be affected due to changes of financial performance, news of a possible merger or loss of key personnel of the issuer.

- **Country Risk**

Investments of the Fund in any foreign countries may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the laws or regulations of the countries in which the Fund invests in. For example, the deteriorating economic condition of the countries may adversely affect the value of the investments undertaken by the Fund in those affected countries. This in turn may cause the NAV or prices of Units to fall.

- **Currency Risk**

As the base currency of the Fund is in Malaysian Ringgit, any fluctuation in the currency exchange rate between the base currency of the Fund and the currencies in which the investments of the Fund are denominated may have an impact on the value of these investments. Investors should be aware that if the currencies in which the investments of the Fund are denominated depreciate against the base currency of the Fund, this will have an adverse effect on the NAV of the Fund in the base currency of the Fund and vice-versa. Investors should note that any gains or losses arising from the fluctuation in the currency exchange rate may further increase or decrease the returns of the investments of the Fund.

- **Credit and Default Risk**

Credit risk relates to the creditworthiness of the issuers of the debt instruments and its expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the debt instrument. Default risk relates to the risk that an issuer of a debt instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the debt instruments. This could adversely affect the value of the Fund.

- **Interest Rate Risk**

Interest rate risk refers to the impact of interest rate changes on the valuation of debt instruments whenever is applicable. When interest rates rise, debt instruments prices generally decline and this may lower the market value of the Fund's investment in debt instruments. The reverse may apply when interest rates fall.

- **Counterparty Risk**

The Fund's placements of deposits and/or investments in money market instruments with Financial Institutions are subject to the risk of the counterparty. Counterparty risk also refers to the possibility that the counterparty being unable to make timely payments of interest and/or principal payment on the maturity date. This may then lead to a default in the payment and/or interest and ultimately, affect the NAV per Unit of the Fund.

- **Business Risk Of Emerging Companies**

This risk is associated with investments in small cap companies. Emerging companies may be more volatile and risky compared with mature and well-established companies. Any irregular fluctuation of the stocks of these companies may affect the Unit price as the price of Units may also fluctuate.

- **Valuation Risk Related to the Fund's Assets**

The Fund's assets will consist of illiquid, unlisted and unquoted securities for which no public market exists, and for which no price quotation may be available from exchanges, brokers or other third party sources. Valuation of assets undertaken or provided by the Manager will be conclusive and binding on all investors. However, these valuations may not reflect the actual prices which would be realized upon a sale of a particular asset. Prospective investors should be aware that the valuation or pricing of certain asset classes, particularly hard-to-price assets such as illiquid, unlisted and unquoted securities, may result in subjective prices being applied to the Manager's calculations of the NAV of the Fund. This could materially affect the NAV of the Fund, particularly if the judgments of the Manager or its third party valuation agents regarding appropriate valuations or pricing is proven incorrect.

- **Private Equity Risk**

The Fund may be subject to the risks inherent in private equity investment. The task of identifying good companies that may become successful and generate good capital gains is difficult. The future performance of any entity into which any part of the Fund is invested and therefore the value of the Fund's investment portfolio may be subject to many factors over which the Fund may have limited or no control.

- **Unlisted Security Risk**

The Fund may be subject to the risks inherent in unlisted investment. The Fund may be compelled to make investment decisions on the basis of financial information that will be less complete and reliable than that customarily available for listed securities. The future performance of any entity into which any part of the Fund is invested and therefore the value of the Fund's investment portfolio may be subject to many factors over which the Fund may have limited or no control.

- **Regulatory Risk**

Regulatory risk refers to the possibilities where security, business, sector, or market may be materially impacted due to the changes in laws or regulations made by the government or a regulatory body. The adverse impact may include the increment business operating expenses, more stringent regulatory requirements for the listing of IPO or any other regulations which may reduce the attractiveness or value of the investment which subsequently may result in a declined in NAV of the Fund.

- **Lack of Transparency Risk**

The Fund may not have access to reliable or detailed information, including both general economic data and information concerning the operations, financial results, capitalization and financial obligations of companies invested in certain countries. The quality and reliability of information available to the Fund might be less than what might be available when investing in developed countries. Certain countries may limit the obligations on companies to publish information, which would further restrict the Fund's ability to carry out due diligence. The Fund may be compelled to make investment decisions on the basis of financial information that will be less complete and reliable than that customarily available in developed countries.

The abovementioned risks which you should consider before investing into a unit trust fund should not be considered to be an exhaustive list. You should be aware that investments in the Fund may be exposed to other risks of an exceptional nature from time to time.

BASES OF VALUATION OF THE ASSETS OF THE FUND

Investment Instruments	Valuation Basis
Investment instruments that are listed and quoted on an exchange	The official closing price or last known transacted price on the eligible market on which the investment is quoted. However, if the price is not representative, for example during abnormal market conditions or not available to the market including in the event of a suspension in the quotation of the investment instrument for a period exceeding fourteen (14) days, or such shorter period as agreed by the Trustee, the investment will be valued at fair value.
Investment instruments not listed or quoted on an exchange	At fair value as determined in good faith by the Manager.

TRANSACTION INFORMATION

CALCULATION OF UNIT PRICES

Valuation Point

Every Business Day is a dealing day of the Fund where the Fund is open for sale and repurchase of Units by the Manager. The Fund will be valued at least once every Business Day. The Fund will be valued at the end of every Business Day and the Manager will publish the NAV per Unit on the Manager's website at www.arecacapital.com following the valuation of the Fund.

Single Pricing Policy

We adopt the single pricing policy to price the Units in relation to investment and Redemption of Units. This means that the selling of Units by the Manager (i.e. when you purchase Units and invest in the Fund) and repurchase of Units by the Manager (i.e. when you redeem your Units and liquidate your investments) will be carried out at the NAV per Unit (the actual value of the Unit). The entry fee/exit fee (if any) would be computed separately based on your net investment/Redemption amount. The single price for investment and Redemption of Units shall be the daily NAV per Unit as at the next valuation

point after the Manager receives the investment or Redemption application (i.e. forward pricing).

How Is The NAV (actual value) Per Unit Calculated?

The Manager will calculate the NAV of the Fund at the end of the valuation point. The NAV is defined as the total value of the Fund’s investment, assets and properties less any liabilities or provisions of the Fund. Where applicable, investment income, fees and other liabilities will be accrued daily in arriving at the NAV of the Fund. The NAV per Unit is then determined by dividing the NAV of the Fund by the number of Units in circulation of the Fund at the valuation point rounded nearest to four (4) decimal places or as agreed between Manager and Trustee.

Illustration 1: Computation of NAV	
	RM
	Securities investment 224,607,604.00
Add:	Assets 2,320,028.00
	226,927,632.00
Less:	Liabilities 210,751.00
	NAV before deducting annual management fee and annual trustee fee for the day 226,716,881.00
Less:	Annual management fee for the day (2.00% per annum) 12,422.84
Less:	Annual trustee fee for the day (0.07% per annum) 434.80
	NAV 226,704,023.36

NAV per Unit

The NAV per Unit is then determined by dividing the NAV of the Fund by the number of Units in circulation of the Fund at the valuation point. If the Units in circulation are 436,555,891 Units at the point of valuation, therefore:

Illustration 2: Computation of NAV per Unit	
NAV per Unit of the Fund	= NAV ÷ Units in circulation of the Fund
	= RM226,704,023.369 ÷ 436,555,891
	= RM0.5193

Computation of Net Investment Amount and Units Entitlement

- For investors who make a lump sum payment inclusive of fees and any relevant taxes which may be imposed by the government from time to time.

The net investment amount (excluding fees and taxes) is determined by dividing the lump sum payment (excluding bank charges) with a charge factor.

Charge Factor = 100.00% + Entry Fee in %

The number of Units invested is determined by dividing the net investment amount (excluding fee and taxes), with the NAV per Unit at the next valuation point after the Manager receives the investment application and rounded up to two (2) decimal places.

Illustration 3A: Allocation of Units to investor	
Assuming you invest a lump sum of RM100,000.00 of gross investment amount with an entry fee of 2.00% and the NAV per Unit of the Fund is RM0.5193, therefore:	
	RM
Gross investment amount	100,000.00

Multiply by NAV per Unit	0.5193
Net amount payable to investor	RM 10,386.00

PERFORMANCE FEE

The Manager is entitled to a Performance Fee of up to 40% on the net total returns upon redemption or Capital Distribution, computed on each Unit Holder's account individually.
