KEY RISKS

6. What are the key risks associated with this fund?

PLEASE BE ADVISED THAT IF YOU INVEST IN UNITS THROUGH AN IUTA WHICH ADOPTS THE NOMINEE SYSTEM OF OWNERSHIP, YOU WOULD NOT BE CONSIDERED TO BE A UNIT HOLDER UNDER THE DEED AND YOU MAY CONSEQUENTLY NOT HAVE ALL THE RIGHTS ORDINARILY EXERCISABLE BY A UNIT HOLDER (FOR EXAMPLE, THE RIGHT TO CALL FOR A UNIT HOLDERS' MEETING AND TO VOTE THEREAT AND THE RIGHT TO HAVE YOUR PARTICULARS APPEARING IN THE REGISTER OF UNIT HOLDERS OF THE FUND).

Below are the risks associated in the product which may cause significant losses if they occur.

General risks of investing in the Unit Trust Funds

- **Market Risk**

Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political, social and/or other factors, which will result in a decline in the fund's net asset value. Market risk stems from the fact that there are economy-wide perils which impact all businesses. Investors will be exposed to market uncertainties no matter how a fund's investments are diversified. The fluctuations in the economy, political and social environment will affect the market price of the fund's investments either in a positive or negative way.

- **Manager's Risk**

This risk refers to the day-to-day management of a fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by the manager, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.

- **Liquidity Risk**
Liquidity risks refer to the ease of liquidating an asset at or near its fair value depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices. In situation where the fund has insufficient cash and is unable to liquidate its assets due to market condition as aforesaid, redemption requests made by the unit holders are likely to be affected as the Manager may not be able to fulfil its payment obligation on time.
- **Financing Risk**
The risk occurs when investors take a financing to finance their investment and thereafter unable to service the financing payments. If units are used as collateral, an investor may be required to top-up the investor's existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower net asset value per unit as compared to the net asset value per unit at the point of purchase towards settling the financing.
- **Performance Risk**
As a result of the risk elements, the returns from a fund are not guaranteed. The value of the fund's investment will vary when disposed and an investment may be worth more or less than when purchased.
- **Inflation Risk**
This is the risk that investors' investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.
- **Non-Compliance Risk**
This risk refers to the possibility that the manager may not follow the provisions set out in the prospectus or the deed or the laws, rules, guidelines or internal operating policies which governs the fund. Non-compliance may occur directly due to factors such as human error or system failure and can also occur indirectly due to amendment on the relevant regulatory frameworks, laws, rules, and other legal practices affecting the fund. This risk may result in operational disruptions and potential losses to the fund. The Manager aims to reduce this risk by placing stringent internal policies and procedures and compliance monitoring processes to ensure that the fund is in compliance with the relevant regulations or guidelines.
- **Suspension of Redemption Request Risk**
Having considered the best interests of Unit Holders, the Redemption requests by the Unit Holders may be subject to suspension due to exceptional circumstances, where the market value or fair value of a material portion of the fund's assets cannot be determined. In such case, Unit Holders will not be able to redeem their Units and will be compelled to remain invested in the Fund for a longer period of time than original timeline. Hence, their investments will continue to be subject to the risks inherent to the Fund.

Specific risks associated with the investment portfolio of Areca Small-Cap & IPO Fund

- **Stock Specific Risk**
Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stocks will adversely affect the Fund's NAV.
- **Equity-related Securities Risk**
A Fund that invest in equity-related securities such as rights and warrants, where price movement is dependent on the price movement of the underlying equities the risk is generally higher than their underlying equities as these equity related securities are leveraged form of investment. The price of equity-related securities generally fluctuates more than the underlying equities and consequently may affect the volatility of the Fund's NAV. For example, warrants have a limited life and will depreciate in value as they approach their maturity date. If a warrant's exercise price is above the share price at any time during its remaining subscription period, the warrant will theoretically carry little value and warrants that are not exercised at the maturity date become worthless.
- **Business Risk Of Emerging Companies**
This risk is associated with investments in small cap companies. Emerging companies may be more volatile and risky compared with mature and well-established companies. Any irregular fluctuation of the stocks of these companies may affect the Unit price as the price of Units may also fluctuate.
- **Leveraged Exchange Traded Fund (ETF) and Inverse Exchange Traded Fund (IETF) Risk**
Investment in ETF and IETF can provide disproportionate gains as well as disproportionate losses to the Fund. The ETF utilizes leverage to obtain the required exposure of multiple times of its Net Asset Value (e.g. 200%) to the Underlying Index while the IETF will obtain the required exposure of substantial (e.g. up to -100%) of its Net Asset Value to the Underlying Index. As such, gains and losses will be magnified and thus will affect the Fund's NAV.
- **IPO Risk**
The Fund may invest in companies at their IPO stage, where securities can experience high volatility, low liquidity, and speculative trading. Such price fluctuations may adversely affect the Fund's NAV.

The abovementioned risks which you should consider before investing into a unit trust fund should not be considered to be an exhaustive list.

You should be aware that investments in the Fund may be exposed to other risks of an exceptional nature from time to time.
